

Barracuda Networks offers industry-leading solutions for network security with focus on enterprise firewalling, content security and data storage, protection and disaster recovery. For the extension of our team we are currently looking for a talented

Software Developer C++/C (m/f)

Location: Innsbruck

We are looking for a Software Engineer to be part of the Network Security Business Unit. In this position, you will work in the VPN team on new features for the VPN Client, the Personal Firewall and develop high-performance VPN Clients/Servers and other components of our Firewall-Products.

Your responsibilities

- Take part in the whole software development process of our Linux-based Firewalls and VPN Clients
- Design Linux and Windows applications in C++ and C
- Work with networking paradigms, architecture, and programming
- Comfortable working in a Linux (or Windows) environment, including tools for development and debugging

Your qualifications

- Computer Science/Computer Engineering background or a degree in a related engineering area
- Preferably 2-3 years of experience in software development
- Good problem solving skills
- MUST: good knowledge of C++ and/or C
- Experience in network programming, C#, XAML, WPF, MFC is a plus
- Fluent in English, both written and spoken

We offer

- A challenging position in a talented and motivated team
- Your personal development is extremely important to us, which is one of the reasons why we created a whole platform filled with training courses and presentations, which will help you grow on the job and push your career even further
- Responsibility for innovative development projects
- A pleasant and international working environment with various benefits
- As much coffee, tea, fruit, yoghurt as you can handle
